----- EPA815-R-05-004 January 2005 Manual for the Certification of Laboratories Analyzing Drinking Water Criteria and Procedures Quality Assurance Fifth Edition Supersedes EPA/570/9-90/008, April 1990 EPA 814-B-92-002, September 1992 EPA 570/9-90-008A, October 1991 EPA 815-B-97-001, March 1997 US Environmental Protection Agency Office of Water Office of Ground Water and Drinking Water ...A metalloid is a type of chemical element which has properties in between, or that are a mixture of, those of metals and nonmetals. There is neither a standard definition of a metalloid nor complete agreement on the elements appropriately classified as such. Despite the lack of specificity, the term remains in use in the literature of chemistry.. The six commonly recognised metalloids are boron ...The alkali metals consist of the chemical elements lithium (Li), sodium (Na), potassium (K), rubidium (Rb), caesium (Cs), and francium (Fr). Together with hydrogen they comprise group 1, which lies in the s-block of the periodic table. All alkali metals have their outermost electron in an s-orbital: this shared electron configuration results in their having very similar characteristic properties.
